Puget Sound Blood Center
HEMOPHILIA TREATMENT CENTER

Hemophilia Treatment Center

Puget Sound Blood Center's Hemophilia Treatment Center (HTC) was established in 1974 as part of a federally funded, nationwide network of comprehensive care clinics dedicated to serving persons with bleeding disorders. Staffed by specialized physicians, nurses, social workers, and support staff, the Blood Center's HTC is dedicated to meeting the lifetime needs of patients and their families. Our program philosophy is a collaborative one which encourages patients and families to be involved in making important decisions regarding care.

HTCs are a critical resource for patients with bleeding disorders. A recent study performed by the Centers for Disease Control and Prevention found that patients with hemophilia who receive care at HTCs live longer and are less likely to be hospitalized for bleeding complications than non-HTC users.

The Blood Center's HTC is committed solely to caring for patients with bleeding disorders. We provide comprehensive medical services to meet the needs of patients throughout Washington State and serve as a community resource for patients, families, and other providers in need of consultative services.

Factor Program

The primary funding source for the Blood Center's HTC comprehensive clinical services is proceeds from factor sales through the 340B program. Congress established the 340B program as part of the Veterans Health Care Act of 1992 so that HTCs and other covered entities can stretch their resources and provide access to quality healthcare services to more patients. The 340B program allows the Blood Center's HTC to purchase clotting factor at a discount on behalf of our patients with bleeding disorders.

"When I buy my factor from the HTC at Puget Sound Blood Center, I know I am helping support the clinical services I have used all my life, and will continue to use in the future."

- Chris Vacano, HTC Patient since 1998

To help families facing the financial impact of treating a bleeding disorder, the Blood Center's HTC provides a full range of factor concentrates at the lowest available prices. Furthermore, all proceeds from factor purchases are used to support clinical services provided by the Blood Center's HTC. Thus, by choosing to purchase factor from the Blood Center, patients can receive the lowest possible prices and help to ensure that the comprehensive care services and expertise will continue to be available and accessible to all patients when needed.

Comprehensive Clinical Care

Funding from the 340B program allows the Blood Center's HTC to offer comprehensive clinical care, including:

Services:

- Physicians
- Specialized master-level nursing care
- Statewide clinics
- Educational outreach
- Family and individual counseling
- Physical therapy
- Home infusion training
- Clinical trials for factor
- Carrier, inhibitor and other testing
- Billing and insurance support
- Orthopedic and dental resourcing
- Bilingual patient support
- 24 hour clinical consult
- Invasive procedure care coordination

Please contact Puget Sound Blood Center's Hemophilia Treatment Center at 1-800-552-0640

"In giving HTCs and other entities access to price reductions the Committee intends to enable these entities to stretch scarce Federal resources as far as possible, reaching more eligible patients and providing more comprehensive services."

- 1994 U.S. Congress, regarding 340B funding
